# Ada Lovelace-Moores

## Full-Stack Time Traveler

## Contact

- ada@futurecomputing.dev
- +44-7710123456
- originalcoder
- ada-lovelace

## Location

- Victorian London

## Work Experience

**January 2020 – Today**
**5 years, 2 months**

**Principal Algorithm Architect** at Temporal Paradox Solutions :

Developing computational models that predict their own development

- Designed a self-evolving neural network that somehow wrote its own documentation (a technological miracle).
- Created 'Babbage 2.0', a quantum computing framework that solved problems before they were submitted, reducing customer wait times to negative 3 days.
- Led a team of 8 engineers in developing time-synchronized databases that maintain consistency across parallel timelines.
- Pioneered 'Analytical Prediction Engine™', a service that has predicted 97% of Silicon Valley startups before their founders even thought of them.

**March 2015 – December 2019**
**4 years, 9 months**

**Debugging Specialist** at Retrograde Technologies :

Fixed bugs in historical computing systems that never existed

- Refactored Charles Babbage's original Analytical Engine designs, improving theoretical processing power by 237%.
- Created a Git-like version control system for punch cards, saving approximately 17,842 historical punch cards from being accidentally dropped.
- Optimized the never-built Mark II calculator, eliminating the possibility of literal bugs (moths) entering the system.

## Education

**September 2008 – June 2012**

**Chronologically Non-Linear University**

- Bachelors: Ph.D in Paradoxical Computing

**September 1835 – May 1842**

**Royal College of Mathematical Arts**

- Bachelors: Dual Major in Algorithmic Poetry and Computational Theory

## Skills

**Languages**: Python, Haskell, FORTRAN (before it existed), Analytical Engine Assembly, Elizabethan English

**Databases**: TemporalDB, PostgreSQL, Mechanical Ledger Systems, Quantum Memory Arrays

**Methodologies**: Time-Agnostic Programming, Predictive Development, Victorian Pair Programming
